SUMMARY

Backend Engineer with 3+ years of experience building high-performance APIs, cloud-native ETL pipelines, and scalable microservices using Python (FastAPI, Flask), MongoDB, and GCP. Proven track record architecting platforms handling 10K+ concurrent users with sub-200ms latency and 99.9% uptime. **Immediate Joiner (0 day notice period).**

EDUCATION

Poornima College of Engineering

B.Tech, Information Technology

Jaipur, Rajasthan

Aug. 2019 – July 2023

India International School

Senior Secondary

Jaipur, Rajasthan

April 2018 – May 2019

EXPERIENCE

Backend Engineer

Edufusion Tech

Sept 2025 – May 2026

Jaipur, Rajasthan

- Engineered a scalable Digital Assessment & Submission Platform using FastAPI and MongoDB, handling 10K+ students with sub-200ms API response times.
- Architected an end-to-end evaluation engine with multi-modal submissions (S3 integration), automated scoring logic, and retry workflows, optimizing DB queries from $O(N^2)$ to $O(N)$.
- Developed an enterprise-grade Real-Time Classroom System with Zoom OAuth integration, featuring clash detection and multi-tenant scheduling for 1000+ daily meetings with 99.9% uptime.
- Built an Exam Registration Workflow with dynamic IST-based time windows and MongoDB aggregation pipelines, reducing registration errors by 60% and support load by 80%.

Associate Cloud Native SDE

D3V Technology Solutions

April 2025 – June 2025

Jaipur, Rajasthan

- Built a cloud-native, event-driven ETL pipeline using Python, GCP Cloud Functions, and Pub/Sub to migrate data across BigQuery environments, with asyncio-based async processing and modular architecture adapting dynamically to varying client schemas.
- Integrated MySQL for pipeline metadata tracking, execution logs, and failure auditing; ensured production-grade reliability with structured logging, service account handling, and error resilience.

Software Engineer

Spectral Tech AI

Jan. 2023 – March 2025

Jaipur, Rajasthan

- Engineered prompt templates and NLP pipelines for an insurance domain chatbot to extract and summarize policy, claims, and premium data; optimized prompts for LLM performance and contextual accuracy.
- Developed a Python (Flask)-based CRM and Time Tracking system using CQRS and RESTful APIs with dashboards for sales, billing, and productivity; empowered executives with real-time insights into leads and resource utilization.
- Built interactive BI dashboards using Power BI, Tableau, and Qlik Sense; led AutoML integration for predictive analytics and used Qlik Replicate for real-time data sync in Acord's ecosystem.
- Created a Python utility for dynamic JSON generation from CSVs with user-defined schemas; designed Azure Data Pipelines for modular, cloud-native ETL across distributed systems.

PROJECTS

BigQuery ETL Pipeline | Python, GCP Cloud Function, BigQuery, MySQL

April 2025 – June 2025

- Built and deployed a serverless ETL workflow on Google Cloud Functions to automate client billing processes using BigQuery for storage and MySQL for job tracking and metadata management.
- Implemented modular, batch-wise data processing with SQLAlchemy for database operations, Pydantic for validation, and dynamic dataset/table creation with retry logic and secure access via Google Service Accounts.
- Github Link:** [BigQuery ETL Pipeline](#)

ERGenix | Python, Flask, Mermaid.js, MySQL, PostgreSQL, SQLite

June 2025 – June 2025

- Engineered a self-hosted schema introspection tool in Flask that automatically discovers live database tables, foreign key constraints, and column structures across MySQL, PostgreSQL, and SQLite and generates an ER diagram along with statistics of your data.

- Implemented client-side rendering with Mermaid.js for dynamic relationship visualization and integrated Chart.js to display key distributions, table sizes, and row count analytics.
- Designed secure ephemeral session management featuring automated 20-minute connection purging, parameterized SQL querying, and multi-format export capabilities (PNG, SVG, PDF).
- **Github Link:** [ERGenix](#)

SmartPDF - PDF Data Extraction | *Python, FastAPI, Gemini API, Pandas, Camelot* June 2026 – Present

- Developed a RESTful API using FastAPI and Python for extracting structured text, tables, and metadata from complex PDFs with rule-based spatial layout parsing.
- Implemented a hybrid AI parsing engine integrating Gemini LLMs with deterministic fallback logic for handling non-standard multi-column invoice layouts.
- **Github Link:** [SmartPDF Extraction Engine](#)

TECHNICAL SKILLS

Languages: Python, SQL

Frameworks & Libraries: FastAPI, Flask, SQLAlchemy, Pydantic, Asyncio, Pandas, NumPy

Databases: MongoDB, MySQL, Google BigQuery, SQL Server

Architecture & Concepts: RESTful APIs, Microservices, Multi-Tenant Architecture, CQRS Pattern, OAuth 2.0, Event-Driven ETL

Cloud & DevOps: GCP (Cloud Functions, Pub/Sub, BigQuery), AWS (S3), Docker, Git, GitHub

API Testing Tools: Postman, Swagger

Analytics & BI (Secondary): Power BI, Tableau, Qlik Sense, Qlik Replicate
